

Infection control data is collected and reported on a quarterly basis. The following data covers the time period from January to March 2024 4th Quarter and includes:

methicillin-resistant staphylococcus aureus (MRSA) bacteremia, vancomycin-resistant enterococci (VRE) bacteremia, central line primary blood stream infection (CLI), ventilator-associated pneumonia (VAP), and surgical site infection prevention (SSI), and C.difficile infections. This data is collected at each of the six Brightshores sites, unless marked NA - not applicable.
